# OpenText Axcelerate 5.13
# Default  Fields in Axcelerate Review & Analysis

| This color = change introduced with Axcelerate 5.13 | | | | | | | |
|---|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Table is sorted by display names | | | Searchable | | | Results list |

| Internal field name | Display name used for Results list column, Smart Filter, Metadata fly-in etc. | Description | If field content matches global search query (and without the use of field based search), this has an influence on the search result. | If field content matches the query, terms are highlighted | Field can be searched with the Search in Smart Filter | Displayable in Axcelerate 5 Results list | Sortable in Axcelerate 5 Results list |
|---|---|---|---|---|---|---|---|
| ax_reviewers | | Tracks all reviewers known to the system; used to map from the user id to the display name. Used,e.g., for batch assignment and user specific access to review states. | | | | | |
| Conversation | - | The field contains a complete XML representation of a chat conversation. | √ | | | | |
| meta_rfc5322_thread_path | - | Used for thread detection by header analysis for RFC 5322 compliant emails. Contains IDs of all parent emails and the current email. | | | | | |
| meta_rfc5322_thread_root | - | Used for thread detection by header analysis. Contains ID of the email to which the current email replies. | | | | | |
| rm_filesize | - | Size of the item  in bytes. Depending on the itemt type, this value might not be exact and only extimated for certain file types. Value is used as a fallback option for the virtual_filesize field. | | | | | |
| rm_footer | - | Content of the footer as detected by the CORE footer detection mechanisms (when enabled). | √ | | | | |
| rm_native_filename | - | Path to the native file in its original location | | | | | |
| ax_cust_multi_<letter> | (Custom  Multivalue <number>) Custom field name is given in Axcelerate 5 UI | Custom multivalue  field for use in Axcelerate 5 | | | | √ | |
| ax_cust_hrchy_<letter> | (Custom Hierarchy <number>) Custom field name is given in Axcelerate 5 UI | Custom hierarchical  field for use in Axcelerate 5 | | | | √ | |
| ax_cust_single_<letter> | (Custom Single Value <number>) Custom field name is given in Axcelerate 5 UI | Custom single value  field for use in Axcelerate 5 | | | | √ | |
| ax_cust_text_<letter> | (Custom Text <number>) Custom field name is given in Axcelerate 5 UI | Custom text field for use in Axcelerate 5 | | | √ | | |

| This color = change introduced with Axcelerate 5.13 | | | | | | |
|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Available | How and where the field is filled | | | | Remarks |
| Internal field name | For reports, export, Metadata fly-in | Before publish | Before publish, details | User input/tagging/foldering | Axcelerate 5 feature | |
| ax_reviewers | | | | | | |
| Conversation | | √ | | | | |
| meta_rfc5322_thread_path | | | Information gathered during indexing | | Publish The information gathered during indexing is filled into the field during the publish. | Requires that data is ingested with Axcelerate 5.2 or higher. |
| meta_rfc5322_thread_root | | | Information gathered during indexing | | Publish The information gathered during indexing is filled into the field during the publish. | Requires that data is ingested with Axcelerate 5.2 or higher. |
| rm_filesize | | √ | | | | |
| rm_footer | | √ | | | | |
| rm_native_filename | | | | | Publish | |
| ax_cust_multi_<letter> | | | | √ | | |
| ax_cust_hrchy_<letter> | | | | √ | | |
| ax_cust_single_<letter> | | | | √ | | |
| ax_cust_text_<letter> | | | | √ | | |

| This color = change introduced with Axcelerate 5.13 | | | | Searchable | | | Results list | |
|---|---|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Table is sorted by display names | | | | | | | |
| meta_recipient | All Recipients | Email - To, CC or BCC email address (includes email address and display name), or chat message recipient address | | √ | √ | | √ | |
| rm_attachmentroot | Attachment Family ID | Field to group and sort parent/attachments together - NOTE: The document in the group without a Parent ID is the parent document. | | | | | | |
| att_p | Attachment Text | Text of an attachment. | | √ | √ | √ | | |
| attachment | Attachments Names | Names of attachments | | √ | √ | √ | | |
| rm_childlink | Attachments/Embeddings | URI to access the original attachment/embedding | | | | | | |
| ax_batch | Batch | Names of batches created for review | | | | | √ | |
| rm_bates | Bates | Bates numbers of Axcelerate productions | | √ | √ | √ | √ | |
| begbates | BEGBATES | Begbates of external productions | | | √ | | | |
| rm_messagecount | Chat Count | Number of messages in a chat | | | | | | |
| rm_chatevent | Chat Event Type | Type of event within a chat, such as: - Attachment Sent - Chat Message - Confidential Message Sent - History Viewed - Invite With Message Sent - Person Entering - Person Leaving | | | | | | |
| model-70 | Concept Groups | Concept Groups, only created if learning was enabled for publishing. Prerequisite to Concept Browser. | | √ | √ | | √ | |
| rmConversion | Conversion | Conversion status of the document as shown in the Redaction view | | | | | √ | |
| rm_creationdate | Creation Date | Creation date of a document | | | | | √ | √ |
| rm_custodian | Custodian | Custodian of the file entered at crawl time | | √ | √ | | √ | √ |
| rm_cust_association | Custom Association | Values for custom associations | | | √ | | | |
| rm_source | Data Source Name | Data source name | | | | | √ | |

| This color = change introduced with Axcelerate 5.13 | | | | | |
|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Available | How and where the field is filled | | | Remarks |
| meta_recipient | √ | √ | | | |
| rm_attachmentroot | √ | √ | | | |
| att_p | √ | √ | Automatic population during indexing | | |
| attachment | √ | √ | | | |
| rm_childlink | | √ | | | |
| ax_batch | √ | | | Batch creation | |
| rm_bates | √ | | | Production | Bates numbers created during production use a specfic format. This makes the Bates field behave differently from other fields: Although the Bates field is configured as searchable, you can only search for Bates numbers with the Bates Smart Filter and field based search. |
| begbates | | | | Can be filled with CSV load before publish or CSV merge after publish | Bates numbers are treated differently from other fields. This explains why the field can contain multiple values, without being configured as "Multi Value" in the document model. |
| rm_messagecount | √ | √ | | Bloomberg files | |
| rm_chatevent | √ | √ | | Bloomberg files | |
| model-70 | √ | | | Learning during publish | |
| rmConversion | √ | | | Conversion, CSV merge with images, CSV load with images (in Axcelerate Ingestion) | |
| rm_creationdate | √ | √ | | | |
| rm_custodian | √ | √ | | | |
| rm_cust_association | | | CSV load possible | CSV merge or manageTaxonomy script | |
| rm_source | √ | √ | | | |

| This color = change introduced with Axcelerate 5.13 | | | | | | | |
|---|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Table is sorted by display names | | Searchable | | | Results list | |
| rm_deliverydate | Date Received | Depending on the email program, the delivery date means the date when the email was received, delivered or last stored. | | | | √ | √ |
| meta_documentcharacteristics | Document Characteristics | Characteristic document properties that are of interest such as: - With Natives - Without Natives - With Embeddings (Document is an MS Office document or an email containing comments or sub documents) - Without Embeddings - With Text - Without Text - No Delivered-To - Without Text (e.g. Zip archive, calendar entry, email without body, image file) - With Attachments (for Emails) - Without Attachments (for Emails) - Text extracted by OCR - OCR extraction failed - Chat content | | | | √ | |
| meta_docdate | Document Date | Document Date is a hybrid field. It takes one date, following this default priority: - rm_sentdate (Emails or Attachments) - rm_deliverydate (Emails or Attachments) - rm_lastmodifieddate (Standard files) - rm_creationdate | | | | √ | √ |
| meta_title | Document Title | Subject for Emails; Microsoft Office documents: "Title" contents if it exists;otherwise the file name | √ | √ | √ | √ | √ |

| This color = change introduced with Axcelerate 5.13 | | | | | | |
|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Available | How and where the field is filled | | | | Remarks |
| rm_deliverydate | √ | √ | | | | |
| meta_documentcharacteristics | √ | √ | | | | |
| meta_docdate | √ | √ | | | | |
| meta_title | √ | √ | | | | |

| This color = change introduced with Axcelerate 5.13 | | | Searchable | | | Results list | |
|---|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Table is sorted by display names | | | | | | |
| rm_doctype | Document Type | Types of documents as defined by Axcelerate eDiscovery. Possible values: - eMail - eMail with attachment - eMail without attachment - Calendar entry - Calendar entry with attachment - Calendar entry without attachment - Archive - Pst - NSF - Standard file - Standard file without attachment - Standard file with attachment - Unspecified - Directory - Contact - Contact with attachment - Contact without attchment - Task - Task with attachment - Task without attachment - Note - Note with attachment - Note without attachment - Post - Post with attachment - Post without attachment - Activity - Activity with attachment - Activity without attachment - E-Mail Stub - Privileged Communication - Miscellaneous - Attachment (attachment of something) - Embedding (embedding of something) - Bookmark (Box bookmarks) | | | | √ | |
| meta_fromdomain | Domain From | Email - from domain (extracted from email address) | √ | | | √ | |
| meta_recipientdomain | Domain To/CC/BCC | Email - recipient domain (extracted from email address) | √ | | | √ | |
| meta_bcc | Email BCC | Email - Bcc email address (includes email address and display name) | √ | √ | √ | √ | |
| meta_cc | Email CC | Email - cc email address (includes email address and display name) | √ | √ | √ | √ | |
| endbates | ENDBATES | Endbates of an external production. | | √ | | | |
| rmerror | Exception | Detailed error description | | | | √ | |
| rmerrorclass | Exception Class | Exception classes give an orientation of where the exception occurred. | | | | √ | √ |
| rmerrortype | Exception Type | There can be different exception types in one exception class. Exception types provide additional information. | | | | √ | √ |

| This color  =  change introduced with Axcelerate 5.13 | | | | | | |
|---|---|---|---|---|---|---|
| This color  =  new field introduced with Axcelerate 5.13 | Available | How and where the field is filled | | | | Remarks |
| rm_doctype | √ | √ | | | | |
| meta_fromdomain | √ | √ | | | | |
| meta_recipientdomain | √ | √ | | | | |
| meta_bcc | √ | √ | | | | |
| meta_cc | √ | √ | | | | |
| endbates | | | | | Can be filled with CSV load before publish or CSV merge after publish | Bates numbers are treated differently from other fields. This explains why the field can contain multiple values, without being configured as "Multi Value" in the document model. |
| rmerror | √ | √ | | | | |
| rmerrorclass | √ | √ | | | | |
| rmerrortype | √ | √ | | | | |

| This color = change introduced with Axcelerate 5.13 | | | | Searchable | | | Results list | |
|---|---|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Table is sorted by display names | | | | | | | |
| rm_external_identifier | External Bates | Field allows to search Bates ranges for external Bates numbers and produce with external Bates numbers. | | | √ | | √ | |
| rm_external_identifier_pni_prefix | External Bates Prefix | Field allows to search Bates ranges for external Bates numbers and produce with external Bates numbers. | | | | | | |
| rm_fileextension | File Extension | File extension as detected and delivered by the connector | | | | | √ | |
| fileformat | File Format | Legacy field. Not used in current version | | | | | | |
| rm_filename | File Name | Names of standard files. | √ | √ | √ | | |
| virtual_filesize | File Size | Size of the item. If native file for the item was not copied, information is taken from the rm_filesize field. For items with a native copy, the size of that copy is used. | | | | √ | |
| meta_filesizetype | File Size Type | File size range:<br>- </= 200,000 Bytes<br>- >200,000, </=2,000,000 Bytes<br>- >2,000,000 and </=5,000,000 Bytes<br>- > 5,000,000 Bytes | | | | √ | |
| rm_foldername | Folder Name | Email program or PST folder containing the email | √ | √ | | √ | |
| rm_numeric_identifier | ID | Unique identifier for the item in and across ECA/R&A. Is used as merge key . | √ | √ | √ | √ | √ |
| rm_image_md5 | Image MD5 Hash | Checksum for images imported via CSV Load or CSV Merge, to be used for consistency checks. | | | | | |
| rm_importanceflag | Importance | Importance of an email, as defined by the sender | | | | √ | |
| ax_issue | Issues | Multivalue field used for tagging. Values are added depending on matter. | | | | √ | |
| rmJobStatus | Job Processing | Bulk jobs with date of execution. This allows users to find documents procecced by specific jobs. Exceptions are marked, too. | | | | | |
| rm_document_language | Language | Language of a document as found by the language detection (as e.g. specified in the lang attribute in the header of a HTML document). | | | | √ | |
| rm_loadbatch | Load Batch Name | Name of load batch as defined for data loading to Axcelerate Ingestion. | | | | √ | |

| This color = new field introduced with Axcelerate 5.13 | Available | How and where the field is filled | | | | Remarks |
|---|---|---|---|---|---|---|
| rm_external_identifier | | √ | | | Can be filled with CSV load before publish or CSV merge after publish | |
| rm_external_identifier_pni_prefix | | √ | | | Is filled automatically when the External Bates field is filled. | |
| rm_fileextension | √ | √ | | | | |
| fileformat | | √ | | | | |
| rm_filename | √ | √ | | | | |
| virtual_filesize | √ | √ | | | | |
| meta_filesizetype | √ | √ | | | | |
| rm_foldername | √ | √ | | | | |
| rm_numeric_identifier | √ | √ | | | | |
| rm_image_md5 | √ | √ | | | Can also be filled after publish, through CSV Merge. | |
| rm_importanceflag | √ | √ | | | | |
| ax_issue | √ | | | √ | | |
| rmJobStatus | √ | | | √ | Filled when bulk jobs are executed: Conversion, global redaction, redaction removal,production, print, OCR | |
| rm_document_language | √ | √ | | | | |
| rm_loadbatch | √ | √ | | | | |

This color = change introduced with Axcelerate 5.13

| This color = change introduced with Axcelerate 5.13 | | | | | | | |
|---|---|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Table is sorted by display names | | Searchable | | | Results list | |
| rm_location | Location | File system path or Internet URL, either to the loose file, or to the container the document belongs to (e.g. a PST archive). | | | √ | √ | |
| rm_md5 | MD5 Hash | Checksum of the native file. | | | √ | | |
| rm_mimetype | Mime Type | The file type as it is extracted from the properties of the file, as opposed to the file extension. | | | | √ | √ |
| rm_lastmodifieddate | Modification Date | Date showing when a specific document was last modified | | | | √ | √ |
| rm_copy_location | Native Location | Field used internally, by certain native copy modes. | | | | | |
| ax_nr_term_hit_types | Non-Relevant Hit Types | Groups of non-relevant hits | | | | | |
| ax_nr_term_hits | Non-Relevant Hits | User-defined keywords that are characteristic for non-relevant documents | | | | | |
| form | NSF Form | Types of Lotus Notes documents (e.g. message, reply). | | | | √ | |
| rm_attachmentcount | Number of Attachments | Number of attachments | | | | | |
| rm_embedding count | Number of Embeddings | Number of embeddings | | | | | |
| office_flags | Office Flags | Extracts and flags Microsoft Office file properties such as, footers, hidden slides, track changes, etc. | | | | √ | |
| rmNumberImagePages | Pages | Number of image pages available for a document | | | | √ | |
| rm_parentlink | Parent ID | Link to the parent document in internal key format. | | | | | |
| phrase | Phrases | Phrases as detected by the automatic phrase detection. | | | | √ | |
| ax_privilege | Privilege | Tagging field used to mark privilege information. Default values can be renamed, new values can be added. | | | | √ | |
| ax_privilege_search_types | Privilege Hit Types | Groups of privilege hits | | | | | |
| ax_privilege_search | Privilege Hits | User-defined keywords that are characteristic for privilege documents | | | | | |
| rmProductionSummary | Production | Production names | | | | | |
| ax_production_workflow | Production Workflows | Used for adding documents to production workflows, and for production management. | | | | √ | |
| rm_saved_search | Published Terms | Name of the saved search used to add the document to a matter. | | | | | |
| meta_read | Read/Unread | Email read - yes or no | | | | √ | |

| This color = change introduced with Axcelerate 5.13 | | | | | |
|---|---|---|---|---|---|
| This color = new field introduced with Axcelerate 5.13 | Available | How and where the field is filled | | | Remarks |
| rm_location | √ | √ | | | |
| rm_md5 | √ | √ | | | When files are stored  via CSV Merge, MD5 hash can be filled in, too. |
| rm_mimetype | √ | √ | | | |
| rm_lastmodifieddate | √ | √ | | | |
| rm_copy_location | √ | √ | | | |
| ax_nr_term_hit_types | √ | | | Smart Tagger | |
| ax_nr_term_hits | √ | | | Smart Tagger | |
| form | √ | √ | | | |
| rm_attachmentcount | √ | √ | | | |
| rm_embedding count | √ | √ | | | |
| office_flags | √ | √ | | | |
| rmNumberImagePages | √ | √ | Automatic population during indexing, CSV merge, CSV load possible | Conversion or CSV Merge | |
| rm_parentlink | √ | √ | | | |
| phrase | √ | | | Publish | |
| ax_privilege | √ | | √ | | |
| ax_privilege_search_types | √ | | | Smart Tagger | |
| ax_privilege_search | √ | | | Smart Tagger | |
| rmProductionSummary | | | | Production | |
| ax_production_workflow | | | √ | Production | |
| rm_saved_search | √ | √ | | | |
| meta_read | √ | √ | | | |

<table>
<tr><td colspan="2">This color = change introduced with Axcelerate 5.13</td></tr>
</table>

| This color = new field introduced with Axcelerate 5.13 | Table is sorted by display names | | Searchable | | | Results list | |
|---|---|---|---|---|---|---|---|
| meta_to | Recipient Address | Email recipient address (includes email address and display name) or chat message recipient address | √ | √ | √ | √ | |
| rm_recipientcount | Recipient Count | Number of recipients in an email or chat | | | | | |
| meta_recipientname | Recipient Name | Email - recipient name (extracted from email address) | √ | √ | | √ | |
| rmRedaction | Redaction | Whether document was redacted or requires redaction | | | | √ | |
| rmRedactColor | Redaction Color | Color of the redaction applied in the viewer. | | | | √ | |
| rm_redaction_labels | Redaction Labels | Legacy field used in Axcelerate Analysis/Axcelerate Review for searchable redaction labels | | | √ | | |
| redaction_reason | Redaction Notes | Reason document was redacted as commented by reviewer. | | | √ | | |
| rmRedactReason | Redaction Reason | Redaction reason that can be added in the viewer. | | | | √ | |
| ax_responsiveness | Responsiveness | Single value field used to tag documents as Responsive or Not responsive. Default values can be renamed and new values can be added. | | | | √ | |
| ax_responsive_term_types | Responsive Term Types | Groups of responsive hits | | | | | |
| ax_responsive_terms | Responsive Terms | User-defined keywords that are characteristic for responsive or relevant documents | | | | | |
| ax_message | Review Comment | Text field for reviewer comments, filled in during review. | | | √ | | |
| ax_reviewed_by | Reviewed by | Name of user who tagged the document using a tagging arrangement. | | | | √ | |
| ax_review_state | Review State | Status of review. Review states can be customized. | | | | √ | |
| ax_pc_workflow | Review Workflows | Names of universes, review workflows, sets, iterations, samples | | | | √ | |
| meta_from | Sender Address | Email sender address (includes email address and display name) or chat message sender address | √ | √ | √ | √ | √ |
| meta_fromname | Sender Name | Email sender name (extracted from email address) or chat message sender name | √ | √ | | √ | |
| meta_fromauthor | Sender/Author | Sender of an email or  chat message, or author of a document | √ | √ | √ | √ | |
| rm_sentdate | Sent Date | Date showing when a specific email was sent | | | | √ | √ |

| | Available | How and where the field is filled | | | | Remarks |
